

Your **1st** choice in pipe has to be good. Because

you don't get a **2nd** chance once it's underground.

To be certain, insist on **3rd** party certification.

And for the ultimate in confidence choose Resin 8.

After all, the ultimate test of pipe is to have someone else evaluate it against a common set of standards. That's why Hancor, the CPPA/PPI and its members developed measures to evaluate and ensure HDPE pipe performance in the industry. Hancor polyethylene pipe is 3rd party verified by an independent lab to ensure consistent high quality.

At Hancor, our goal has always been to ensure that our customers can expect the highest level of quality and performance. So we included 3rd party compliance in our own quality assurance initiative: Resin 8 Certified Superior Formulation. The Resin 8 specification starts with the highest quality raw materials and includes 3rd party AASHTO certification as well as 7 other Hancor quality control standards. Because when you specify Resin 8, you've specified the best ... and then some!
