

WEST VIRGINIA DOH APPROVES ADS/HANCOR NYLOPLAST DRAINAGE STRUCTURES FOR ALL ROADWAY APPLICATIONS

The West Virginia Division of Highways, Materials Control, Soils and Testing Division has granted a Materials Division provisional approval per Materials Procedure 106.00.02.

H-20 Rated

Nyloplast products are made from PVC pipe, with component segments produced using a single thermo forming process and joined by a solvent weld bell spigot configuration. The resulting heavy-duty PVC structure withstands very high traffic loading and impact, making it ideal for drain basins exposed to H-20 conditions.

ENGINEERED TO OUTPERFORM

ADS & Hancor have established a reputation for leadership in the drainage industry. Two of our state-of-the-art products are now solving water management challenges in West Virginia. Nyloplast® drainage structures have been approved by the West Virginia Division of Highways, as has 60" N-12 ST high-density polyethylene (HDPE) pipe.

Nyloplast

All Nyloplast engineered surface drainage products are customized to your specifications, meaning no field fabrication or other work on the job site is required. Costly leakage problems are avoided with easy-to-install gasketed joints providing a watertight seal and compensating for pipe length expansion and contraction. Nyloplast products now offer American-made castings, which are available in 2 x 2 and 2 x 3 sizes.

HDPE Pipe

Advanced Drainage Applications: HDPE pipe is used for cross drains, side drains, storm sewers, culverts, landfills and other installations across the country. It's available in a wide range of sizes from 4" to 60" diameters for flexibility in all your projects.

Outstanding Value

Nyloplast, and N-12 pipe are lightweight, requiring fewer people, less time and less heavy equipment to install compared to other products. It all adds up to lower installation costs. With the many other advantages, the savings are huge.
